Insurer automation: information request

What we need to build quote automation for the Fiducial Quote Fetcher

Prepared for	Senior management / project owner
Prepared by	Fiducial Quote Fetcher project team
Date	2 November 2026
Response requested by	_____ (suggested: within 5 working days)

Why we are asking

The Quote Fetcher lets an advisor enter a customer's details once and fetch quotations from up to eight insurers. The secure application shell, the comparison engine and the validation rules are built and tested. **The insurer integrations cannot start until we have three things from you**. Each one is described below, with a form to fill in.

#	What we need	Why it matters
1	**The insurers to automate**, in priority order, and the product to quote at each	Decides what gets built first and what each quote request means.
2	**Each insurer's quote form details**: steps, fields, allowed values and where the result appears	Lets us map the Quote Fetcher's customer data to each insurer's form and read the premium correctly.
3	**A demo / test login** for each insurer, and who receives the OTP	Lets us test the automation against the real portal without touching customer data.

> **How the advisor stays in control.** The application never bypasses a login, OTP or CAPTCHA. The advisor signs in and completes those steps themselves in a visible, isolated browser window for each insurer. The application only fills in the quote form and reads the result.

What happens next

When	What we do
On receipt of section 1	Confirm the build order and plan the first insurer.
On receipt of sections 2 and 3 for the first insurer	Build the field mapping and the result reader, test with the demo login, and report the outcome. Each further insurer is added the same way.
Throughout	Any insurer without a working demo login or form details stays on manual entry, so the product can still be released.

1. Insurers to automate

Please confirm which insurers should be automated, the order, and the one product to quote at each. Each insurer sells several health products, so the automation needs one named product per insurer. The planned mode below comes from the project plan; please correct anything that is wrong.

Insurer	Planned mode (project plan)	Automate? (Yes / No / Manual only)	Priority (1 = first)	Product / plan to quote
ICICI Lombard	Automated; candidate for the first one			
HDFC ERGO	Automated only if feasible (canvas-based pages may need extra work)			
Niva Bupa	Automated			
Tata AIG	Advisor-assisted (OTP)			
Star Health	Automated or manual			
United India	Advisor-assisted (image CAPTCHA)			
Bajaj Allianz	Advisor-assisted (sign-in and CAPTCHA)			
New India Assurance	Likely manual (CAPTCHA)			

Any insurer marked *No* or *Manual only* will still be supported through manual entry, so every insurer can appear in a comparison.

2. Each insurer's quote form details

For every insurer marked *Yes*, please provide the items below. **Screenshots or a short screen recording of each step (using dummy data only) are the fastest way to give us this**; a written description also works.

Item	What to provide
Entry point	The quote page address, and whether it is the retail site or the agent / POSP portal.
Steps in order	Every screen from sign-in to the premium result, in sequence.
Every field	Label, type (text, dropdown, date, tick box), required or optional, the allowed values (for dropdowns, the full option list: relationship, cover type, sum insured and so on) and any rules (age limits, pincode format).
Manual steps	Where sign-in, OTP or CAPTCHA appears. The advisor completes these; they are never bypassed.
The result	Where the premium, plan name and cover details appear, and whether the premium includes GST and is annual or multi-year.
Unusual behaviour	Anything the page does that could trip up automation: pop-ups, timeouts, forced page reloads, canvas or image-based pages.

Form-details sheet (copy this page once per insurer)

Insurer	
Portal address (URL)	
Retail or agent / POSP portal	
Product / plan quoted	

Steps in order (one line per screen)

Step	Screen name	What happens on it
1		
2		
3		
4		
5		

Fields (continue on a separate sheet if needed)

Field label	Type	Required?	Allowed values / rules

Sign-in / OTP / CAPTCHA steps	
Where the premium appears	
GST included? Annual or multi-year?	
Screenshots attached (Y / N)	

3. Demo / test login for each insurer

Please provide an authorised **demo or test account** for each insurer to be automated, and tell us who receives the OTP during development and testing. We will test with dummy customer data only.

Insurer	Login address	Account type / owner	Who receives the OTP, and how	CAPTCHA on sign-in?
ICICI Lombard				
HDFC ERGO				
Niva Bupa				
Tata AIG				
Star Health				
United India				
Bajaj Allianz				
New India Assurance				

Please do not write usernames or passwords in this document. Send credentials through your normal secure channel (a password manager share or a direct, private message). The application never stores an insurer password in the source code, logs or plain files; the advisor signs in on the insurer's own page.

4. Optional: dummy customers with expected premiums

This is not required to start, but it lets us prove the extraction is correct. For one or two dummy customers (for example a single adult, a family floater), please give the details entered and the premium you expect each insurer to show.

Dummy customer (age, members, pincode, sum insured, cover type)	Insurer	Expected premium	Basis (GST incl. / excl., period)
