PDF Comparison Report Specification

1. Purpose

Generate a branded, readable, selectable-text comparison PDF for one to eight insurer result slots using validated persisted data.

2. Required sections

1. Header: approved logo, firm name, contact details, licence/POSP and GST details where applicable.
2. Customer block: customer name, member relationship/age as approved, sum insured, pincode, cover type, report date.
3. Comparison table: insurer, plan, sum insured, annual premium in INR, source tag (Auto/Manual), and relevant coverage summary if available.
4. Status boxes: failed/timed-out/unsupported with safe reason; manual entries marked “Entered manually”.
5. Footer: approved disclaimer, consent line, page numbers.

3. Rules

- State premiums are indicative and subject to insurer underwriting.
- Cheapest valid comparable premium may be highlighted; this is not a policy recommendation.
- Do not compare unlike coverage silently. Display differences or suppress cheapest ranking if comparability is not established.
- Missing/invalid premiums are not zero and are not ranked.
- Manual entries are visibly distinguished and not represented as insurer-verified by the app.
- Use canonical stored values; do not derive report values from untrusted UI state.
- Rupee symbol ■ must render correctly on both platforms.
- Layout must remain readable for 1, 2, 4, and 8 insurers; support pagination without clipped content.
- Avoid exposing unnecessary personal data in filenames.
- Include only approved branding/legal text.

4. Verification

Test premium accuracy, rounding, rupee glyph, long plan names, failed/manual states, eight-insurer density, page breaks, selectable text, branding, disclaimer, and PDF regeneration offline.
