User Guide — Insurance Advisor

Before using the app

Use authorized insurer accounts and customer data only. Confirm permission to process member data. Some insurers may require manual login, OTP, CAPTCHA or manual quotation entry. A quote is indicative, not a guarantee of policy issuance or coverage.

Create a quote

1. Select New Quote.
2. Enter customer details.
3. Enter insured members and required coverage information.
4. Review insurer-specific fields and fix validation errors.
5. Select insurers and review the request.
6. Start the workflow.

Complete insurer authentication

Sign in through the approved insurer window. Complete OTP or CAPTCHA yourself when requested. The app must not bypass security controls. If the portal blocks automation, use manual fallback.

Review results

Each insurer has its own status. Review plan, cover, premium, timestamp and source. A failed insurer does not erase successful results. Do not treat a missing premium as zero.

Enter a manual result

1. Complete the quote using the insurer's permitted workflow.
2. Enter insurer, plan, cover and premium.
3. Add the retrieval time and evidence screenshot if required.
4. Confirm accuracy.
5. Verify the result is labelled Manual.

Generate the PDF

Review customer data, coverage assumptions, premium values, source labels, branding and disclaimer. Save to an approved folder and share only with authorized recipients. Cheapest premium does not mean best policy; review terms, exclusions, waiting periods and limits.

History and data handling

Use History to search/reopen prior quotes. Retention may automatically delete app-managed data. Exported PDFs stored elsewhere may need separate deletion. Do not share unredacted screenshots or diagnostic logs.
