Installation, Handover and UAT Guide

1. Before installation

Confirm OS/version/architecture, installer version/checksum, signing status, authorized insurer access, approved branding/disclaimer, dummy test data, guides and support contact.

2. Install

1. Obtain installer from approved location.
2. Verify filename, version, checksum and signing/publisher status.
3. Install using client-approved permissions.
4. Launch and complete first-run wizard.
5. Confirm local storage initializes and app version is correct.
6. Do not enter real credentials into unapproved screens.

3. Client smoke test

Using dummy data:

- Create a quote and add members.
- Select a test-supported insurer/mock workflow.
- Verify status/progress and human authentication step if applicable.
- Test manual fallback.
- Generate PDF and verify values, ■, branding, source labels and disclaimer.
- Close/reopen and verify history.
- Confirm diagnostics contain no secrets or unredacted personal data.

4. Walkthrough agenda

Product scope and limitations; quote creation; member data; insurer selection; sign-in/OTP/CAPTCHA handling; result states; manual entry; comparison rules; PDF export; history/retention; troubleshooting/support.

5. Handover checklist

- [ ] Installer installed and version recorded.
- [ ] Smoke test passed.
- [ ] User and install guides supplied.
- [ ] Supported and manual-only insurers explained.
- [ ] Branding and disclaimer approved.
- [ ] Retention and credential handling explained.
- [ ] Support contact provided.
- [ ] Credentials rotated as agreed.
- [ ] UAT results and known issues documented.
- [ ] Client acceptance recorded.

6. UAT record

Client representative: _____ Build/version: _____ OS/version: _____ Date: _____ Test cases passed/failed: _____ Accepted limitations: _____ Outstanding defects: _____ Decision: Accept / Accept with conditions / Reject Signature/approval: _____
