RAID Register: Risks, Assumptions, Issues and Decisions

Risks

ID	Risk	Impact	Mitigation	Owner
R-01	Portal UI changes	Adapter failure	Fixtures, isolated parsers, manual fallback	Technical owner
R-02	CAPTCHA/MFA blocks automation	High	No bypass; manual path	Product owner
R-03	Incorrect premium parsing	High	Schema checks, fixtures, review	Technical owner
R-04	PII/credentials in logs	Critical	Redaction, secret scan, review	Security owner
R-05	Insecure credential storage	Critical	OS-backed storage, fail closed	Technical owner
R-06	Windows/macOS packaging differs	High	Separate clean-machine smoke tests	Release owner
R-07	Signing/notarization unavailable	High	Verify credentials/pipeline early	Release owner
R-08	DB migration damages history	High	Migrations, backup/recovery tests	Technical owner
R-09	PDF implies manual result verified	High	Explicit source labels/disclaimer	Product owner
R-10	Automation not permitted by insurer terms	High	Written review before enabling	Business owner
R-11	Branding/legal details wrong	High	Written client approval	Business owner
R-12	Bulk Excel delays v1	Medium	Defer unless approved as P0	Product owner
R-13	Deadline compresses QA	High	Freeze scope, evidence-based release gate	Delivery owner

Assumptions to validate

- Client has authorized accounts and permission for each planned workflow.
- One advisor uses one local machine; no cloud sync required.
- Dummy customers/test accounts can be supplied.
- Existing Electron/SDK design supports target OS versions.
- Branding, licence/GST details, disclaimer and consent are supplied.
- Update artifact hosting is available if auto-update is in scope.

Open decisions

- Is Excel bulk upload/ZIP v1 or v1.1?
- Which adapters are authorized, technically feasible and release-ready?

- Exact Windows/macOS versions and CPU architectures?
- Retention duration and deletion scope?
- Is optional credential saving enabled?
- Approved report disclaimer/consent text?
- Where are signed installers and update artifacts hosted?
- Who owns signing identities and renewals?
- What is the approved premium comparability rule?
- What is the UAT sign-off authority and support SLA?

Decision log

ID	Decision	Status
D-01	Local-first desktop model	PRD baseline; confirm
D-02	Electron + React + TypeScript	Proposed; reconcile with repo
D-03	SQLite/local storage	PRD assumption; verify existing implementation
D-04	HTML template to PDF	PRD baseline
D-05	Manual fallback for unsupported insurers	Required
D-06	Bulk Excel ZIP deferred to v1.1	PRD baseline; owner confirmation needed
