Glossary and Open Questions

Glossary

- **Adapter:** insurer-specific module that performs an approved workflow and normalizes results.
- **Advisor-assisted:** a human completes a permitted step such as login or OTP.
- **Manual result:** premium entered by advisor; visibly labelled and not represented as automatically verified.
- **Fixture:** sanitized deterministic sample used to test parsing.
- **Orchestrator:** service coordinating multiple insurer runs, statuses, timeouts, retries and cancellation.
- **P0/P1/P2:** release priority categories defined by the project.
- **POSP:** Point of Sales Person, where applicable to the business context.
- **UAT:** User Acceptance Testing by client/advisors.
- **Retention:** policy defining how long app-managed quote data and attachments remain stored.

Questions requiring owner/client answers

1. Is Excel bulk upload and ZIP-of-PDFs required for v1, or can it remain v1.1?
2. Which insurers are contractually/technically approved for automation?
3. Are authorized test accounts and dummy customers available for all insurer workflows?
4. What exact test cases 1–4 (and floater case 5) should use as expected outputs?
5. What are the minimum supported OS versions after validating Electron/native dependencies?
6. What is the approved retention period?
7. Are saved insurer credentials allowed by client policy?
8. What is the approved disclaimer and consent wording?
9. What is the authoritative rule for comparing coverage and highlighting cheapest premium?
10. Where will signed installers and update artifacts be hosted?
11. Who owns Apple Developer and Windows code-signing identities?
12. Who signs UAT and accepts known limitations?
13. What support SLA and escalation contact will be promised?
14. Does client require offline backup/restore?
15. Which branding/licence/GST fields apply to the actual advisory firm?
